Animation

Motion Editor

- **Add a control point:** Cmd-click on the curve or dashed line on the graph.
- **Remove a control point:** Cmd-click a control point.
- **Select multiple control points on a graph:** Hold Shift and click each control point.
- **Convert a control point between smooth and corner:** Option-click the control point to extend or pull in the handles of a control point. This works on all control points except on the X, Y, and Z (spatial) properties.
- **Move a curve up and down on a graph without changing the keyframes time values:** Option-drag the curve between any two control points.
- **Separate handles on a control point:** Option-drag a handle. This makes the handle move independently. Release the Alt key and drag the opposite handle past 180 degrees to make both move together again.
- **Move a control point to a different frame and retain its value:** Make sure the control point is DESELECTED, and then hold Shift and drag it to a new frame. Or select the control point and don't release the mouse button, then hold Shift and drag it to a new location.
- **Change values by steps of 10:** Hold Shift while scrolling the hot text.
- **Change values by steps of 0.1:** Hold Ctrl while scrolling the hot text.

Tween Spans (in Timeline)

- **Select a single frame in a tween span:** Cmd-click a frame in the tween span.
- **Select multiple frames in a tween span:** Cmd-drag frames in the tween span.
- **Extend the length of a tween span without stretching the animation:** Shift-drag the end of the tween span to the right.
- **Make the tween span shorter without stretching the animation:** Shift-drag the end of the tween span to the left (removes keyframes you drag over).
- **Duplicate a span:** Option-drag the span to a new location on a timeline.
- **Duplicate tween frames:** Select frame(s) within a span (Cmd-click or drag) and then Option-drag (Mac) the frames to a new location on a timeline.
- **Insert empty frames between two adjacent tween spans:** Option (Mac) while dragging the breakline between the spans.
